

# cubeSQL

## REAL Studio Plugin

CubeSQL REAL Studio plugin inherits directly from the Database class so all the methods and properties of the Database class can be used directly from within the CubeSQL plugin. More informations about the Database class can be found online at:

[http://docs.realsoftware.com/index.php/Database\\_Class](http://docs.realsoftware.com/index.php/Database_Class)

Standard Prepare method is not supported by CubeSQL plugin and it has been replaced by the VMPrepare method. Additional properties and methods are listed below.

**CubeSQLPlugin module:**

- SSLLibrary As FolderItem
- CryptoLibrary As FolderItem
- Version As String
- kAESNONE (Integer Constant)
- kAES128 (Integer Constant)
- kAES192 (Integer Constant)
- kAES256 (Integer Constant)
- kSSL (Integer Constant)

**CubeSQL Class additional properties:**

- ServerVersion As String
- Port As Integer
- Timeout As Integer
- AutoCommit As Integer
- Encryption As Integer
- EndChunk As Boolean
- UseREALServerProtocol As Boolean
- IsEndChunk As Boolean
- PingFrequency As Integer
- SSLCertificate As FolderItem

**CubeSQL Class Additional methods:**

- Connect() as Boolean
- IsConnected() as Boolean
- LastRowID() as Int64
- SendChunk(chunk as String)
- ReceiveChunk() as String
- SendEndChunk()
- SendAbortChunk()
- Ping() as Boolean
- VMPrepare(sql as String) as CubeSQLVM

- TableName(rs As RecordSet) As String

#### **CubeSQLVM methods:**

- BindInt(index As Integer, value As Integer)
- BindDouble(index As Integer, value As Double)
- BindText(index As Integer, value As String)
- BindBlob(index As Integer, value As String)
- BindInt64(index As Integer, value As Int64)
- BindNull(index As Integer)
- BindZeroBlob(index As Integer, length As Integer)
- VMExecute()
- VMSelect() As RecordSet

Please take a look at the examples contained in the REAL Studio folder (inside the Clients folder) in order to better understand how to correctly use the classes, properties and the plugin.

To use the new plugin just instantiate it with:

**Dim db as New** CubeSQLServer

When you install the cubeSQL plug-in in REALbasic's plugins folder, the cubeSQLServer class is added to REALbasic's framework. With it, you can develop custom cubeSQL applications. The cubeSQLServerPlugin requires REALbasic 2005 Professional, Release 1 or later.
